

# Package Repositories

## Hipster

**Main Repository:** <http://pkg.openindiana.org/hipster>

This repository contains our development branch, where we publish our leading edge work. This repository should be safe to use for early adopters who are comfortable with fixing issues should they arise.

To use it, run:

```
pfexec pkg set-publisher -O http://pkg.openindiana.org/hipster openindiana.org
```

**Encumbered Repository:** <http://pkg.openindiana.org/hipster-encumbered>

This repository contains packages which we can't redistribute in some countries due to patents restrictions. So use it only if you live outside of them (read: not in US).

To use it, run:

```
pfexec pkg set-publisher -O http://pkg.openindiana.org/hipster-encumbered hipster-encumbered
```

## 3rd Party Repositories

### SFE - spec-files-extra

This repository contains extra packages like **LibreOffice** and more. See [this wiki page](#)

You know about additional 3rd party repositories / IPS packages? Please ask for adding links here.

## Archive

**The following repositories are DEPRECATED and left here only for reference.**

**Development Repo:** <http://pkg.openindiana.org/dev>
