

Build Reports

This section is for build reports:

```
SNV_134 on SNV_134 succeeded
SNV_137 on SNV_134 failed
SNV_138 on SNV_134 succeeded
```

Post build checks

After building onnv several logs are placed in the directory `$CODEMGR_WS/log/log.yyyy-mm-dd`. [build run/](#)
`$CODEMGR_WS` path is set in `opensolaris.sh` or `openindiana.sh`
In case of `openindiana.sh` the path is `/export/builds/OpenIndiana_b[onnv_number]/onnv-gate`

Files to check after a build are:

- `nightly.log`
- `mail_msg`

`nightly.log`

This contains the full log, and is therefore quite large at least 70Mb.
To check for possible errors use the following two searches.

```
grep -n "not remade" nightly.log
```

```
grep -n "\*\*\* Error" nightly.log
```

Please see the known issue section below [Known issues in build reports](#)

`mail_msg`

This contains the build summary.
It will be mailed to you, if you are STAFFER.
There should be no errors present.
These sample build summaries are available for reference

- [onnv138 on 134 at dev06](#)
- [onnv_142 on IPS b134](#)
- [snv_137 on snv_134 \(Alasdair on dev08\)](#)
- [snv_138 on snv_134 \(James on dev09\)](#)
- [snv_144 on onnv_138 \(snv134\) \(Alasdair on dev08\)](#)

Known issues in build reports

ONNV 138
Source: 20100806 irc openindiana chat

02:41 storkone I did got two occurrences of "**** Error code 1 (ignored)" Each time following this line `/export/builds/OpenIndiana_b138/onnv-gate/usr/src/cmd/perl/5.8.4/distrib/ext/Errno` I don't knw what to make out of it. I can put the complete error on the wiki if anybody wants to look at it.
02:48 McBofh storkone: those perl5.8.4 errors can be ignored, as long as they're in the "make clobber" output section

02:57 storkone McBofh: they both were in the "Make clobber" section. Do you know if these two errors are also present in more recent builds?

02:58 McBofh they've been for freakin' ever

03:02 McBofh storkone: the "Validating manifests..." messages are due to an error in the way the closedbins were built. This was fixed as part of 6593513
make nightly -O cheaper on 21 April 2010, part of build 139

03:03 McBofh and the messages about liblib's debug info was resolve in snv_142 with 6908185 ilbadm and liblib include debug information which changes every build
