

Community HCL

Deprecation warning

The page has been migrated to <http://docs.openindiana.org/community-hcl/getting-hardware-info/> . Avoid touching this wiki page.

Purpose

This is a community maintained HCL (Hardware Compatibility List), compiled from contributions from OpenIndiana users.

It is not an official statement or guarantee from the OpenIndiana Project.

It is provided as a guide to help users discover what hardware works with OpenIndiana, and to guide users with any specific instructions where required.

The HCL consists of two categories:

1. [Components](#)
2. [Systems](#)

How to find out what hardware you have?

If you are running the standard GNOME/MATE install of OpenIndiana, then **Device Driver Utility** (ddu) is your friend (it is located by default under Applications->System Tools).

When run, it will provide a list of hardware sorted by category and the driver (if used).

The device line can be copied into the relevant HCL table, along with which driver is being used. If for any reason you don't want (or can't) enter it yourself into the HCL, feel free to email the details (Device, driver, OI hipster 'osnet-incorporation' and 'userland-incorporation' versions and status) to hcl-feedback@openindiana.org and the [oi-dev](#) mailing-list.
