

gfx-drm

The [gfx-drm](#) gate consists of different kernel components for support of various graphic adapters in the illumos and the Direct Rendering Infrastructure (**DRI**) library, [libdrm](#).

Component	Scope
libdrm	The library enables communication between kernel components and user-space libraries through the DRI protocol.
agpart	Kernel driver for the Graphics Address Remapping Table (GART) / Graphics Translation Table (GTT) support.
header-drm	System headers for DRM/KMS kernel drivers and user-space libraries.
drm	KMS drivers
i915	Intel KMS driver for Intel Graphics Media Accelerator (GMA) and Intel HD Graphics adapters.
