

# Knowledge Base for Compiling and Installing Software Not Available in Package Form

Some pieces of software are simply not available in packaged form, and must be compiled from source. This section is intended to be a place where people can see how others have installed some of these programs. Some of them include service method and manifest files, so you don't have to reinvent the wheel.

Please contribute your own experiences here, too!

**Please make a separate page for each piece of software.**
