Developing OpenIndiana

The development of OpenIndiana is focused on the OpenIndiana Hipster rolling-release distribution.

While old Development Releases (/dev) were produced by a release engineering from a different software consolidations, a unified build system **oi-userland**, is now used to build OpenIndiana Hipster (/hipster), as explained on Building with oi-userland and the GitHub page oi-userland .

The instructions for Building the Operating System have links to the active source repositories as well as old (/dev) consolidation repositories.

OpenIndiana Hipster

Changelog	TODO List
Latest news and history of updates	Tasks for upcoming snapshots
Contributing to Hipster	Building with oi-userland
How to join the development of OI Hipster	Packaging with the unified build system
